1. Answer Selection

Question GOOD*
POTENTIAL*
BAD*

SemEval-2015 Task 3:
Answer Selection in cQA

3. The Baseline

Similarity Features

- greedy string tiling
- longest common subseq.
- Jaccard coefficient
- word containment
- idf-weighted intersection
- cosine similarity
- PTK similarity between syntactic trees

Heuristic Features

The comment (c) includes...

- URL or email
- "yes", "sure", "no", "@", etc.
- 3 or more repeated chars.
- longer than expected words
- thank* ack*

- c is posted by the same user who asked the question (u_q)
- the category of the question
- length of the comment

2. The Issues

Good Scissor

Dears,
Anyone have an idea where to find a good scissor for hair and beard trimming please???

Visit Family food center
Visit Family food center

Al rawnaq airport road...U'll
Al rawnaq airport road...U'll find all types of scissors there

Thank you all

Thanks for all... I will try that.

Gymnastic world cup

Does anyone know what time the competition starts today?

sorry - is this being held

sorry - is this being held here in Doha? If so, I'd love to go. Expat Sueo
P.S. Is that a labradoodle in your avatar?

No actually a Cockapoo! Yes the comp. runs from today
until Wednesday at Aspire.

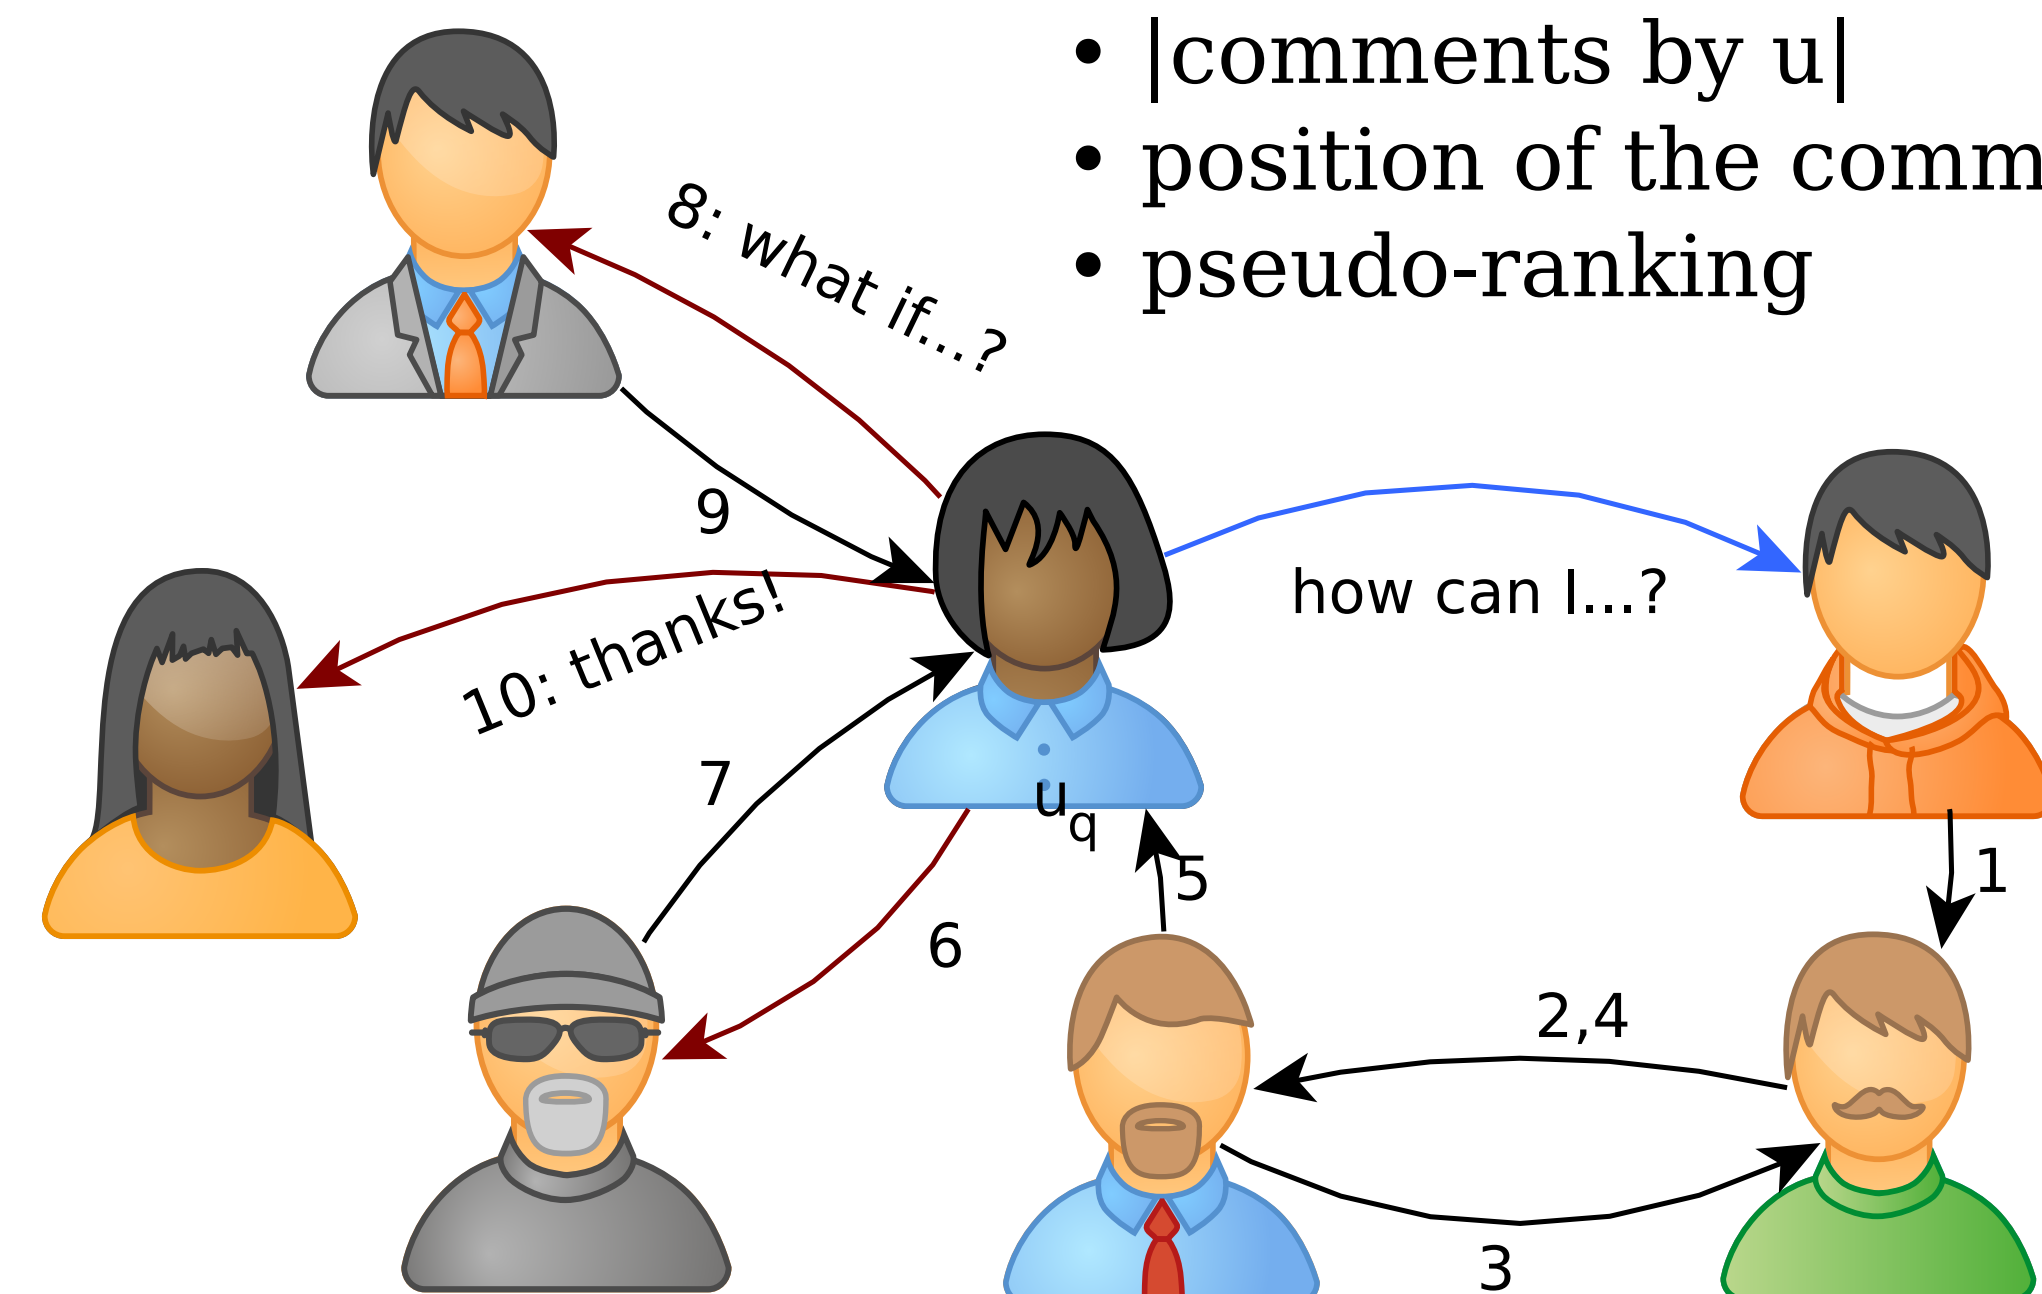

Thanks for the info - maybe

Thanks for the info - maybe I'll turn up after the TableTop Sale is done and dusted!

4. The Alternatives

Structured Prediction Models

Thread-Level Global Features

c appears before a comment by u_q which

- contains an acknowledgement
- contains no acknowledgements
- contains a question
- contains a question (after c)

- Identification of dialogues
- |comments by u |
- position of the comment
- pseudo-ranking

5. The Outcome

Comment- and Thread-Level Evaluation: Test | Cross-validation

6. Remarks

- Answer dependencies are helpful to improve in this task.
- The dependencies can be exploited with thread-level features, causing the context of a comment to affect quality estimation.
- If opting for an ad-hoc learning algorithm (e.g., CRF or SVM^{hmm}), the class of a comment depends on the class assigned to its neighbours as well.
- Robust context-aware features are the best way to push up the performance of the classifier.
